    <h1><b>Web development</b><hr></h1>
    <p>Web development is the work involved in developing a website for the
    Internet (World Wide Web) or an intranet (a private network).[1] Web development can
    range from developing a simple single static page of plain text to complex web
    applications, electronic businesses, and social network services.</p>
    <span>For larger organizations and businesses, Web development teams can
    consist of hundreds of people (Web developers) and follow standard methods like
    Agile methodologies while developing Web sites. Smaller organizations may only
    require a single permanent or contracting developer, or secondary assignment to
    related job positions such as a graphic designer or information systems technician.
    Web development may be a collaborative effort between departments rather than the
    domain of a designated department.</span>
